

## Precautions at Home When Someone Is Suspected of Being Infected with the COVID-19

If you have a family member who is suspected of being infected with the COVID-19, please note the following for the family members living together.

1. Separate rooms for infected people from other people living together as possible.
2. The number of people who care for infected people should be as limited as possible (one person is desirable).
3. As many as possible, everyone uses masks.
4. Gargle and wash your hands frequently.
5. Ventilate as often as possible during the day.
6. Disinfect common parts such as handles and knobs.
7. Wash dirty linens and clothing.
8. Close up the garbage bag tightly and take it out.
